If you was going thro'  
Oranmore

on a fine November morning  
Its here you'd see some  
steeples for bunting  
With the real old play  
sportsmen

With both gentlemen & ladies  
jumping hedges, bushes  
ditches trenches  
and high stone walls  
There was a full view  
of those woods  
and Regnard out before them

Really tho before we go  
Will surely chase them

Now it is high Contra Lake  
Pequard not he will take  
And he will swim across  
the foaming water  
But when Miss Blake came  
to the lake

She crossed the deck  
with great speed  
And safely landed over  
Then she turned back  
and asked those other  
Cowards were they  
Coming over  
Then she all called  
those hounds by  
their names  
and ~~then~~ none to  
round the horn

There was Bran, Blücher  
Shot, Spring, Joane, and  
Fowler.

There was really, Jolly, Polly,  
Dolly, Juno, Giggler,  
Topsy, Riddler, Oids  
Nanny, <sup>Nancy</sup> Fanny, Farmer,  
Collard, Tilly, Freeman,  
Cousin and Daisy,  
There was Spanker, Jakes  
Sleepy, Smoker, Viper  
Ranger, Quack, Tish,  
Cliff, and Snowball  
and Langhans.

by an American 'com' man  
and put us in the go  
newspaper (propaganda)  
biography of Ol' Gaz carrying  
about 70000 and  
an anti a cup the real  
less an about, sent  
a big team on the way  
the following day.

1. The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atom. It is shown that the structure of the atom is determined by the laws of quantum mechanics, and that the laws of quantum mechanics are based on the principles of wave mechanics. The paper then proceeds to a discussion of the specific properties of the atom, such as its size, its mass, and its energy levels. It is shown that the size of the atom is determined by the wavelength of the electron waves, and that the mass of the atom is determined by the mass of the electron. The energy levels of the atom are shown to be determined by the laws of quantum mechanics, and are found to be in good agreement with the experimental results.

2. The second part of the paper is devoted to a discussion of the specific properties of the atom, such as its size, its mass, and its energy levels. It is shown that the size of the atom is determined by the wavelength of the electron waves, and that the mass of the atom is determined by the mass of the electron. The energy levels of the atom are shown to be determined by the laws of quantum mechanics, and are found to be in good agreement with the experimental results.
