Meadow Lark 1927

14251a.

Adult 70 hatching soon after
commence of season after 1 day's
2-3 mile or 2-3 mi. in grass.
(Meadow Lark) 6-7 ft. of meadow
1-2 ft. (Meadow). The adult bird
in summer is slaty brown on
the upper parts and more rufous
brown on the cheeks, chin
and throat; the under parts and
a narrow wing bar are white.
In winter the plumage is browner
and sides of face, chin and
throat are white. The first
plumage of the juvenile resembles
that of the adult in summer
but in autumn one more like
the winter dress is attained.
